# Crystal Structure of 2,3-Dihydro-3-ethyl-9-(phenylsulfonyl)carbazole-4(1H)-one 

Tuncer HöKelek ${ }^{* \dagger}$ and Süleyman PAtir**<br>*Hacettepe University, Department of Physics, 06532 Beytepe, Ankara, Turkey<br>**Hacettepe University, Department of Science, Faculty of Education, 06532 Beytepe, Ankara, Turkey

## (Received April 6, 2000; Accepted July 25, 2000)

The title compound (Fig. 2) may be considered as a synthetic precursor of tetracyclic indole alkaloids, dasycarpidone and uleine, which have been isolated from Aspidosperma. ${ }^{1}$ It was

Fig. 2 Molecular structure of the title compound with atomnumbering scheme. The thermal ellipsoids are drawn at the $50 \%$ probability level.
magnesium sulfate and evaporated. The residue was crystallized from ethanol.
The results of an X-ray structure determination are given in Tables 1 - 3, and the molecular structure in Fig. 2.
Rings $\mathrm{A}, \mathrm{B}$ and D are planar, while ring C is not planar with a maximum deviation at $\mathrm{C} 2[-0.238(6) \AA]$. They are also twisted with respect to each other. The dihedral angles between the least-squares planes are $\mathrm{A} / \mathrm{C}=5.4(5), \mathrm{A} / \mathrm{D}=91.3(1), \mathrm{B} / \mathrm{C}=5.3(5)$, $B / D=90.9(1)$ and $C / D=96.0(1)^{\circ}$.
