(Received December 25, 2000; Accepted April 16, 2001)

4-(4-Bromophenyl)-1,7,7-trimethyl-1,2,3,4,5,6,7,8-octa-hydroquinazoline-2,5-dione was obtained from Biginelli-type cyclocondensation ${ }^{1}$ of 5,5-dimethylcyclohexane-1,3-dione with urea and 4-bromobenzaldehyde: yield 1.16 g (62.19\%), m.p. $174-175^{\circ} \mathrm{C}$. A summary of the key crystallographic information is given in Table 1. The atomic coordinates and equivalent isotropic displacement parameters with estimated standard deviations for atoms except H are listed in Table 2, and selected bond lengths and bond angles in Table 3. A perspective view of the title molecule showing the atomnumbering scheme is presented in Fig. 2.

The phenyl ring at C 4 is nearly perpendicular to the
