# Crystal Structure of Bis[4-(5-methyl-2-oxyphenyl- $\mathbf{\kappa} \mathbf{0 , 2 \kappa 0} \mathbf{)}$-4-imino-2-penten-2-olato- $\left.O, O^{\prime}, N^{\prime}\right]$ copper(II) 

Orhan Atakol ${ }^{* \dagger}$, Filiz Ercan**, Dincer Ülkü** and Nazife Yilmaz*<br>*Department of Chemistry, Science Faculty, Ankara University, Tandogan 06100 Ankara, Turkey<br>**Department of Engineering Physics, Haceteppe University, Beytepe 06322, Ankara, Turkey

The title compound, $\mathrm{Cu}_{2}\left(\mathrm{C}_{12} \mathrm{H}_{13} \mathrm{NO}_{2}\right)_{2}$, is a doubly oxygen-bridged dimeric copper(II) complex. Doubly oxygen bridged complexes with subnormal magnetic moments are known to exhibit super exchange interaction. ${ }^{1-3}$ The Cu atoms have a distorted square-planar environment, with bond angles in the range 76.9(1)$100.3(1)^{\circ}$. The average $\mathrm{Cu}-\mathrm{O}$ distance is $1.916(2) \AA$ and the average $\mathrm{Cu}-\mathrm{N}$ distance is $1.941(3) \AA$. The Cu and Cu 2 atoms are located $0.0339(5)$ and $0.0336(5) \AA$ off the coordination best plane, respectively. The bridging angles $\mathrm{Cu} 1-\mathrm{O} 1-\mathrm{Cu} 2, \mathrm{O} 1-\mathrm{Cu} 2-\mathrm{O} 3, \mathrm{Cu} 1-\mathrm{O} 3-\mathrm{Cu} 2$ and $\mathrm{O} 1-\mathrm{Cu}-\mathrm{O} 3$ are 102.8(1), 76.9(1), 102.5(1) and 77.5(1) ${ }^{\circ}$,

w=\left[\sigma F^{2}+(0.002 F)^{2}+1.15\right]^{-1}
$$

respectively. The dihedral angles between the $\mathrm{Cul}-\mathrm{Ol}-$ $\mathrm{Cu} 2-\mathrm{O} 3$ bridging plane and the coordination planes ( O 1 , $\mathrm{N} 1, \mathrm{O} 2, \mathrm{O} 3$ and $\mathrm{O} 1, \mathrm{O} 3, \mathrm{~N} 2, \mathrm{O} 4$ ) around coppers are $2.9(9)$ and $8.0(3)^{\circ}$, respectively. The $\mathrm{Cu} \cdots \mathrm{Cu}$ distance [3.021(2) $\AA$ ] in the bridging plane is rather long, to have a direct interaction. This distance is in between the two values: $2.994(2) \AA^{4}$ and $3.073(2) \AA^{5}$, reported previously.

Table 1 shows the crystal and experimental data while final atomic parameters are given in Table 2. The bond distances and angles are shown in Table 3.
4-(5-Methyl-2-hydroxyphenyl)iminomethyl-2-hydroxy-2-penten ( 0.205 g ) was dissolved in 30 ml hot MeCN . To this mixture, a solution of $\mathrm{Cu}\left(\mathrm{CH}_{3} \mathrm{COO}\right)_{2} \cdot \mathrm{H}_{2} \mathrm{O}$ ( $0.199 \mathrm{~g}, 1 \mathrm{mmol}$ ) in 30 ml hot MeOH was added and mixed. After 2 h the dark green Cu complex was filtered and dried.

This complex ( 0.100 g ) was crystallized from 70 ml $\mathrm{N}, \mathrm{N}$-dimethylformamide.
